OBJECTIVE

Aspiring Software Development Engineer and NIT Trichy undergraduate with strong problem-solving skills and hands-on experience in Java, Spring Boot, MERN, and full-stack application development.

EDUCATION

Bachelor of Technology in Electronics and Communication Engineering, NIT Trichy 2023 – Present
CGPA: 8.19 / 10

Jawahar Navodaya Vidyalaya, Class XII, CBSE 2022
Percentage: 95.4%

SKILLS

Languages	C++, Java
Frameworks	Spring Boot, Spring AI, MERN (MongoDB, Express.js, React.js, Node.js)
Tools	Git, Postman, IntelliJ IDEA, Visual Studio Code
Certification	Full-Stack Web Development Cohort by Harkirat Singh (100xDevs)

EXPERIENCE

Software Development Engineer Intern – Bank of New York (BNY) May 2026 – Jul 2026

- Developed enterprise-grade **Java and Spring Boot** features for data onboarding, XML processing, validation, and retention workflows.
- Extended an XML-to-JSON application with **Sub Fund processing** using JAXB, XSD, XML parsing, and automated validation.
- Implemented initial-load support for reference datasets using **SQL extraction and control-table orchestration** in a Spring Boot CLI application.
- Optimized a **Spring Boot–Snowflake** SQL purge application with progressive cashflow purge, query optimization, and API integration, improving purge efficiency by **25%**.
- Resolved **database connection pool exhaustion** during BNY's Fixathon, reducing request timeout errors and improving application stability.

PROJECTS

Smart Commerce – AI-Powered E-Commerce Platform May 2026

- Developed an AI-powered e-commerce backend using **Spring Boot, Spring Data JPA, and PostgreSQL** for product catalogue, orders, inventory, and image management.
- Integrated **Spring AI, OpenAI GPT-4o, and PgVector** to build a RAG-based chatbot for semantic product search, order assistance, and customer support.
- Implemented AI-powered product and image generation with automatic vector embedding synchronization.
- Designed scalable REST APIs, DTO-based architecture, JPA entity relationships, and transactional order workflows for data consistency.

Pay Zip – MERN Stack-Based Digital Wallet April 2025

- Built a secure peer-to-peer digital wallet using the **MERN** stack with transactional fund transfers.
- Implemented **OTP-based email authentication** and session handling for secure user verification and transactions.
- Developed a responsive React.js frontend and used MongoDB Atlas for cloud-based data storage.
